64 / 100 Speed

⚠ Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 2 blocking script resources and 1 blocking CSS resources. This causes a delay in rendering your page.

Approximately 4% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Remove render-blocking JavaScript:

- https://article2seorank.space/js/libs/modernizr-2.6.2.min.js

- https://article2seorank.space/js/libs/gumby.js

Optimize CSS Delivery of the following:

- https://article2seorank.space/templates/blackwhite/css/gumby.css

⚠ Consider Fixing:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Enable compression](#) for the following resources to reduce their transfer size by 93.3KiB (75% reduction).

- Compressing https://article2seorank.space/templates/blackwhite/css/gumby.css could save 37.6KiB (79% reduction).

- Compressing http://article2seorank.space/ could save 28.5KiB (80% reduction).

- Compressing https://article2seorank.space/js/libs/gumby.min.js could save 14.4KiB (74% reduction).

- Compressing https://article2seorank.space/js/libs/modernizr-2.6.2.min.js could save 4.7KiB (55% reduction).

- Compressing https://article2seorank.space/js/libs/gumby.js could save 4.2KiB (66% reduction).

- Compressing http://article2seorank.space/js/libs/jquery.mobile.custom.min.js could save 3.8KiB (61% reduction).

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- https://www.googletagservices.com/activeview/js/current/osd.js?cb=%2Fr20100101 (50 minutes)

- http://pagead2.googlesyndication.com/pagead/js/adsbygoogle.js (60 minutes)

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 2.6KiB (41% reduction).

- Minifying https://article2seorank.space/js/libs/gumby.js could save 2.6KiB (41% reduction).

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 3.5KiB (26% reduction).

- Compressing https://article2seorank.space/templates/blackwhite/css/imgs/logo.png could save 2.2KiB (34% reduction).

- Compressing https://article2seorank.space/image.php could save 628B (33% reduction).

- Compressing https://article2seorank.space/uploadmin/190417100056.jpg could save 455B (15% reduction).

- Compressing https://article2seorank.space/templates/blackwhite/css/imgs/noavatar.png could save 161B (13% reduction).

- Compressing https://article2seorank.space/templates/blackwhite/css/imgs/search.png could save 157B (12% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best

performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 61% of the final above-the-fold content could be rendered with the full HTML response.

- Click to see the screenshot with only the HTML response: snapshot:6

96 / 100 User Experience

⚠ Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target Visit Now! Add Website is close to 2 other tap targets final.

- The tap target Visit Now! Add Website is close to 1 other tap targets final.

- The tap target CLICK HERE- Visit Site Worth and 1 others are close to other tap targets final.

- The tap target is close to 1 other tap targets final.

- The tap target is close to 1 other tap targets final.

- The tap target <input id="gobutton" type="submit"> is close to 1 other tap targets final.

- The tap target and 1 others are close to other tap targets final.

- The tap target and 1 others are close to other tap targets final.

- The tap target <input id="usernames" type="text" name="usernames" class="text input"> and 3 others are close to other tap targets final.

- The tap target <button type="submit">Open an Account</button> and 2 others are close to other tap targets final.

- The tap target is close to 4 other tap targets final.

- The tap target <input id="newurl" type="text" name="newurl" class="text input"> is close to 2 other tap targets final.

- The tap target 16-30 and 35 others are close to other tap targets.

- The tap target next is close to 1 other tap targets.

- The tap target tool and 3 others are close to other tap targets.

- The tap target seo is close to 2 other tap targets.
