Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 54 blocking script resources and 53 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 6% of the final above-the-fold content could be rendered with the full HTML response.

Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `<div class="tp-leftarrow tparrows gyges">` is close to 2 other tap targets.
- The tap target `<div class="tp-leftarrow tparrows gyges">` is close to 2 other tap targets.
- The tap target `Conditions générales` and 3 others are close to other tap targets.

Should Fix:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Desktop](#)

[Enable compression](#) for the following resources to reduce their transfer size by 145.1KiB (66% reduction).

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 54 blocking script resources and 53 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 6% of the final above-the-fold content could be rendered with the full HTML response.
