Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 3 blocking script resources and 14 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

415.2KiB of the HTML response was required to render the above-the-fold content. This requires 5 network round-trips. [Prioritize the above-the-fold content](#) so that it can be rendered with only the first 2 round-trips' worth of HTML.
